

Ashhar Ahmad Raza

Pune, Maharashtra, India — razaashhar2002@gmail.com — +91 7277862662

📁 Portfolio — in LinkedIn — 📄 GitHub — </> LeetCode

Summary

- Software Engineer with nearly **3 years of experience** building scalable backend and full-stack applications using **Java, Spring Boot, Node.js, React, Python, and SQL**. Experienced in designing production-grade REST APIs, distributed systems, cloud-native applications, and performance-critical backend services.
- Delivered and contributed to **6+ enterprise applications**, taking complete ownership of **3–4 production systems** from architecture and development to deployment, optimization, and production support.
- Hands-on experience building concurrency-safe workflows, database optimization, Redis caching, Kafka-driven communication, authentication systems, payment gateway integrations, AI-powered applications, and cloud deployments on AWS.
- Strong foundation in **Data Structures, Algorithms, Object-Oriented Design, System Design, Low-Level Design, High-Level Design, SOLID Principles, and Design Patterns**, with over **500+ coding problems** solved across LeetCode and CodeChef.

Professional Experience

Software Engineer Finvu, Pune, India

August 2026 – Present

- Troubleshoot and resolved **production issues in Account Aggregator (AA) APIs**, performing root-cause analysis, implementing fixes, and ensuring reliable API behavior across production workflows.
- Designed and developed a full-stack **Admin Panel** with **frontend and backend components** for managing **Financial Information Providers (FIPs)** and **Financial Information Users (FIUs)**.
- Implemented **Role-Based Access Control (RBAC)** to manage authorization and restrict administrative operations including **viewing, updating, and deleting** FIP and FIU data based on user permissions.
- Implemented comprehensive **request, input, and business-rule validations** across administrative APIs to maintain data integrity, prevent invalid operations, and improve system reliability.
- Developed an **alternate mobile number feature** that allows users to link an additional mobile number when their primary number is not associated with an existing account, improving account accessibility and user onboarding.
- Implemented **unique mobile-number association rules** to restrict an alternate number from being linked to multiple accounts, preventing duplicate associations and maintaining account consistency.
- Developed and enhanced **WebSocket-based API functionality** to support real-time communication for the alternate mobile number workflow.

Software Engineer PEOL Technologies Pvt. Ltd., Bengaluru, India

October 2023 – August 2026

- Delivered **6+ enterprise applications** while taking end-to-end ownership of **3–4 production systems**, collaborating with business stakeholders across requirement analysis, development, deployment, and production support.
- Developed secure **business applications and REST APIs** that automated procurement, education, and enterprise workflows, replacing manual processes and improving operational efficiency.
- Implemented **15+ business-critical features** including reverse bidding, payment processing, **Role-Based Access Control (RBAC)**, reporting dashboards, and administrative modules across multiple production applications.
- Optimized **database queries, data retrieval strategies, and backend processing**, reducing report and search execution time from approximately **5 minutes to 30 seconds**.
- Diagnosed and resolved **production issues** across multiple enterprise applications by performing root-cause analysis, implementing corrective fixes, and improving application reliability.
- Participated in **code reviews, technical discussions, hiring activities, and mentoring of junior engineers**, contributing to maintainable architecture and engineering best practices.

Education

Scaler School of Technology

Software Engineering Program (Continuing Education)

April 2025 – Present

Relevant Coursework: Java, Spring Boot, Data Structures & Algorithms, SQL, Java Multithreading, Low-Level Design, High-Level Design, System Design, Distributed Systems, Horizontal Scaling, Vertical Scaling

Visvesvaraya Technological University

Bachelor of Engineering – Computer Science and Engineering

August 2019 – June 2023

CGPA: **8.0/10**

Technical Skills

- **Programming Languages:** Java, Python, JavaScript, TypeScript, C++
- **Backend Technologies:** Spring Boot, Node.js, Express.js, FastAPI, REST APIs, gRPC, Microservices, Spring Security, Authentication, RBAC
- **Frontend Technologies:** React.js, React Native, Redux, HTML5, CSS3, Bootstrap, Tailwind CSS
- **Databases:** MySQL, MongoDB, PostgreSQL, Redis
- **Messaging & Distributed Systems:** Apache Kafka, RabbitMQ, Redis, gRPC, Optimistic Locking, Event-Driven Architecture
- **Cloud & DevOps:** AWS EC2, AWS S3, Docker, Kubernetes, NGINX, CI/CD, GitHub Actions
- **AI & Intelligent Systems:** FastAPI, LLM Integration, AI Agents, Tool Calling, Prompt Engineering, Voice AI Pipelines
- **Testing & Monitoring:** JUnit, Mockito, Swagger, Prometheus, ELK Stack, New Relic
- **Software Engineering:** System Design, Low-Level Design, High-Level Design, OOP, SOLID Principles, Design Patterns, Multithreading, Performance Optimization

Projects

AI Voice Sales Agent Platform [↗](#)

Python, FastAPI, React, Deepgram, Groq LLM, Pipecat

- Built a real-time AI voice sales agent capable of conducting human-like cold-call conversations by orchestrating Speech-to-Text, Large Language Models, and Text-to-Speech services.
- Engineered an asynchronous FastAPI backend with session management, timeout handling, and fault recovery to support low-latency conversational workflows and reliable request processing.
- Designed an agentic workflow that coordinated conversation state, tool invocation, response generation, and structured JSON outputs for downstream CRM and analytics integration.
- Developed a React dashboard for monitoring live conversations, visualizing transcripts, and managing AI interactions while following modular architecture and reusable component design.

Enterprise Reverse Bidding Platform

Java, Spring Boot, React, Redis, SQL

- Developed a reverse bidding platform enabling multiple vendors to participate in concurrent procurement events while ensuring consistent bid processing and data integrity.
- Implemented optimistic locking and Redis caching to handle concurrent bid updates, reducing database load and preventing conflicting transactions during high user activity.
- Built secure REST APIs supporting bidding workflows, user management, authentication, and administrative operations consumed by React-based frontend applications.
- Optimized database performance using efficient SQL queries, pagination, and improved data access strategies, resulting in faster bid processing and improved application responsiveness.

Enterprise School Management Platform [↗](#)

Node.js, Express.js, React, React Native, SQL, AWS

- Developed a full-stack school management platform enabling student enrollment, course management, attendance, authentication, and administrative operations across web and mobile applications.
- Designed modular backend services with Express.js implementing secure authentication, Role-Based Access Control (RBAC), payment integration, SMS notifications, and AWS S3-based file management.
- Built responsive user interfaces using React and React Native with reusable components, improving user experience across desktop and mobile devices.
- Containerized frontend and backend services using Docker and prepared cloud deployment workflows with NGINX and AWS while maintaining scalable and maintainable application architecture.
